Art Unit: 1731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 12, 17 and 20 are rejected under 35 U.S.C. 103(a) as obvious over JANSON in view of ADMITTED PRIOR ART (specification, page 2, line 5 to page 3, line 12) in view of WO 84/04552 and CAMACHO.

JANSON teaches using a borate containing pulping liquor in a pulping process. The ADMITTED PRIOR ART teaches the importance of measuring hydroxide, carbonate and sulfide concentrations in pulping processes. It would have been obvious to measure the hydroxide, carbonate and sulfide concentrations in the pulping process of JANSON. WO 84/04552 teaches using gas chromatography to measure sulfide concentrations. It would have been obvious to one of ordinary skill in the art to use the gas chromatography measurements of WO 84/04552 to measure the sulfide concentration, e.g. sulfide ions, of the ADMITTED PRIOR ART. CAMACHO teaches the problem of interfering ions in pulp ion measurements (page 98, column 3). It would have been obvious to suppress any interfering ions in the measurements of the ADMITTED PRIOR ART.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Application/Control Number: 10/660,298

Art Unit: 1731

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. There is no disclosure as to how the pulping is disclosed based on the combined analytical results. Page 5 of the specification states that the pulping parameters can be determined without determining the chemical species, but there is no disclosure as to how this is done.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve Alvo whose telephone number is 571-272-1185.

The examiner can normally be reached on 6:00 AM to 2:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Griffin can be reached on 571-272-1189. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
